You are a senior React, TailwindCSS, Framer Motion, and Three.js developer.

Create a complete production-quality website with clean architecture, reusable components, responsive design, smooth animations, and organized code.

Tech Stack

Use:

- React (Vite)
- TailwindCSS
- Framer Motion
- React Router
- TypeScript
- Modern ES6+
- Responsive Design

Generate all required files and code.

Theme

Create a cozy, magical, playful, premium-looking website for my best friend.

Important:

- DO NOT use pink overload.
- DO NOT use heart-shaped decorations.
- Use soft gradients.
- Use glassmorphism.
- Use floating particles.
- Use smooth transitions.
- Use elegant typography.
- Use cute but modern aesthetics.
- Make it feel personal and memorable.

Landing Page

When the website opens:

Show a beautiful animated background.

Center a premium locker/vault/password card.

Features:

- Password input field
- Unlock button
- Hint button

Hints should come from an editable array:

```
const hints = [
  "Hint 1",
  "Hint 2",
  "Hint 3",
  "Hint 4",
  "Hint 5",
  "Hint 6"
];
```

Every click on Hint should show the next hint.

Loop after the last hint.

Wrong password:

- Shake animation
- Cute error message

Correct password:

- Unlock animation
- Transition to Welcome Screen

Welcome Screen

After successful login:

Display animated text:

"Welcome to Developer's World and Imagination"

Requirements:

- Typewriter animation

- Glow effect
- Framer Motion entrance animation
- Particle celebration

3D Character Guide

Use this exact Sketchfab model:

https://sketchfab.com/models/fe9a5a7e3f8a477bb195d695867eade8/embed

Embed the model using the Sketchfab iframe.

Requirements:

- Character visible throughout the experience
- Floating idle animation
- Glassmorphism frame
- Responsive sizing
- Dialogue bubble system
- Character acts as website guide

The character should dynamically update her dialogue based on user interactions.

Main Choice Screen

Character asks:

"What would you like to do?"

Show two large animated buttons:

A. 🎮 Play a Game

B. 🤫 Know the Developer's Secret

Secret Path

When Secret button is clicked:

Maintain click counter.

First Click

Move button to random screen position.

Reduce size slightly.

Character says:

"Kyu pta karne mere secret 🙄"

Second Click

Move again.

Character says:

"Sab kuch te pta tenu 😏"

Third Click

Move again.

Character says:

"Game khelo, cutie... 😌"

Fourth Click

Move again.

Character says:

"Ki gall pulgi sab kuch? Jo pta karne 🤨"

Fifth Click

Open Secret Page.

Secret Page

Display:

"There is no data registered about the developer.

You just have to message him directly.

Go quick, he is waiting for you..."

Show placeholders:

[PHONE_NUMBER]

[INSTAGRAM_ID]

[SNAPCHAT_ID]

Fake Fetching Animation

Below the message:

Display:

"Maivi te dekha secret tere, iss lyi fetching your local storage to web 😁😅"

IMPORTANT:

This must be a harmless visual joke only.

Never access:

- localStorage
- cookies
- files
- browser data
- user information

Instead:

Create a fake progress bar animation.

Purely visual.

No data collection whatsoever.

Stop Button

Display:

"Stop Fetching"

When clicked:

Character says:

"Na na hun nhi rukna putt 😉😃"

Continue progress animation.

When progress reaches 100%:

Show:

"Return Home"

button.

Game Path

When user selects Play Game:

Open Game Page.

Character says:

"Ki gall mere secret nhi dekhne 😁😂?"

Then:

"Ok whatever, let's play a game."

Display Play button.

Question 1

Show:

2 + 2 = ?

Options:

1 2 3 4 5 6 7 8 9

Use cute rounded animated buttons.

If answer is NOT 4:

Show:

"Maybe you failed in maths 😭"

After 2 seconds:

Redirect to Landing Page.

If answer IS 4:

Show:

"Ave 4? 22 hunda answer 😶😑"

Then move to Question 2.

Question 2

Show:

How many times does the letter Z appear in your name?

Options:

1 2 3 4 5

Regardless of selection:

Show:

"Uffff, ekk vaar v nhi anda Z, saare answer galat tere 🤦‍♂️🤦‍♂️"

Then show:

"Hje hor game khelni c parr code bht vdda hogya, so isto pahla tu exit kare mai exit krda.

Next version lyi tyar rhi.

Te haa je gaala kaddni hoye te sidde developer nu kddi 👌😒"

Display OK button.

Return user to Landing Page.

Architecture Requirements

Create:

- components/
- pages/
- hooks/
- utils/
- assets/

Use:

- React Router
- Custom hooks
- Reusable button component
- Reusable dialogue component
- Reusable modal component
- Reusable progress component

Animation Requirements

Use Framer Motion extensively.

Add:

- Page transitions
- Floating elements
- Character entrance
- Dialogue animations
- Button hover effects
- Success transitions
- Particle effects

Mobile Responsiveness

Support:

- Mobile
- Tablet
- Desktop

Character and dialogues must remain usable on small screens.

Customization Section

At the top of the project create a config file:

config.ts

Allow easy modification of:

- Password
- Hints
- Phone Number
- Instagram ID
- Snapchat ID

without editing the main codebase.

Generate the complete project with all files, routing, components, styles, animations, and implementation details. Do not provide partial code. Generate production-ready code.
